

SOLARIUM LABS

Intelligent Systems Training Program

The *Intelligent Systems – Training Program* is available for any person with basic mathematical and computational background who wants to increase his knowledge in intelligent systems. The training program is centered on automated learning systems, but it also introduces basic concepts about cognitive (e.g. reasoning and decision-making) and computer sciences.

The participant will be able to understand, analyze, design and implement intelligent systems. Also, it will help participants to improve statistical, computational and design skills.

Benefits

- Dedicated training programs for companies
- Personalized training, in-room and online
- Hands-on and mini-projects to improve design skills
- Rapid and efficient training programs

This training program provides a broad introduction to intelligent systems and automated learning systems.

Five courses

all at once (80 hours)
or single (16 hours)

- 01 Introduction to Artificial Intelligence and Data Science
- 02 Machine Learning for Beginners
- 03 Pattern Recognition and Stochastic Modeling Systems
- 04 Data Structures, Data Mining and Data Visualization
- 05 Computational Intelligence and Bio-Inspired Systems for Optimization

If you are interested in our *Intelligent Systems - Training Program* or you need a customized training program, please feel free to contact us at:
